OPENMX / CPU PERFORMANCE

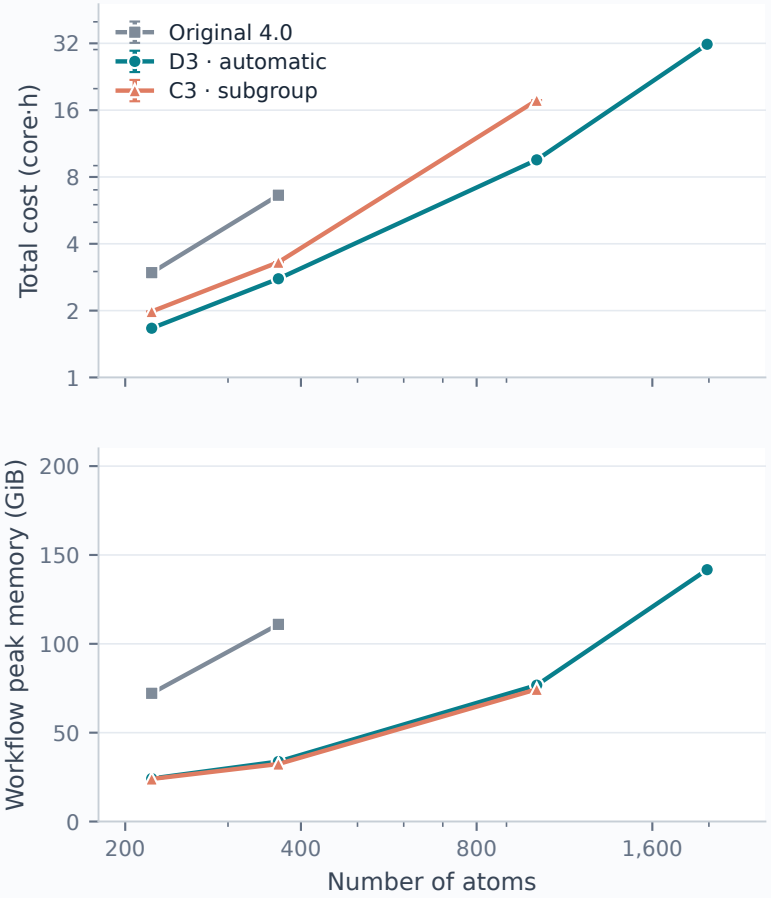
Less compute. Less memory.

Full NSOC + one-step SOC · single-node · 64 MPI × 1

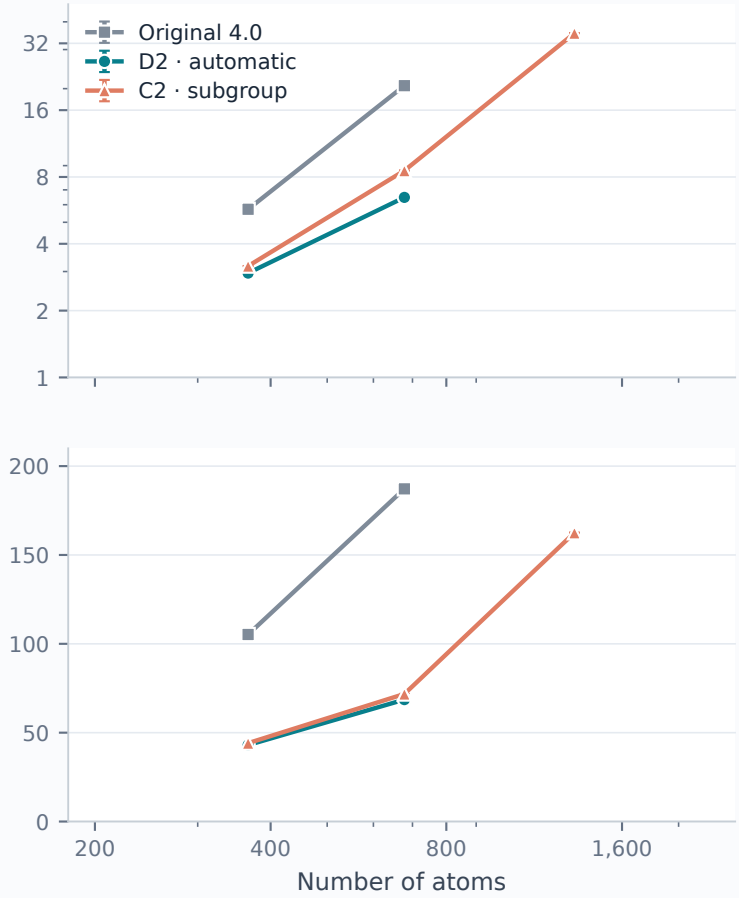
3.19× largest measured speedup

70% less peak memory*

$MoTe_2$ / node037



HgI_2 / node039



150 Ry · criterion 10^{-7} · History 30 / StartPulay 15 · completed, uninterrupted runs only

*Maxima across four matched default-profile cases; not necessarily the same case. Lines join measurements; no fitted scaling law.
